

## Getting your new digital sign player set up:

1. Open the NUC PC (media player) box and remove the media player and power cord.
2. Plug the power cord into the round jack on the media player, the black HDMI cable into the HDMI port, and the blue network cable into the network port labeled 2.5G.
3. Plug the other end of the HDMI cable into the TV and the other end of the network cable into a nearby network jack. For WiFi setup, see the other side of this page.
4. Open the keyboard box and find the USB dongle in the front edge of the box. Remove it and plug it into any of the blue USB ports on the media player.
5. Remove the keyboard, and pull the yellow tab protecting the batteries. If you don't see the yellow tab, slide the battery cover off and remove the tab. Slide the power switch on the back edge of the keyboard to the ON position.
6. Power on the media player by pressing the power button. After the device powers on, EngageS3 will launch. If it doesn't launch within 5 minutes, please call S3 Technologies' Help Desk at 330-648-5408.

**For Wifi connection:**

1. Complete all set up steps except for plugging in the network cable.
2. Once Engage S3 launches, press Ctrl+Alt+Q on the keyboard to exit the signage software.
3. From the start menu, type network. Click on "Network Status"
4. Click Show Available Networks, then click on the network to connect to.
5. If there is a password, enter it in the field that says Enter the Network Security Key, then click "Next".
6. Wait until it reads "Connected" underneath the name of the network.
7. Restart the media player.
